Things are moving, but there is a reason the call those holes in the ground borings..... things move slowly in this kind of event,. Attempting to finish the well at DC-03, and Eric is out supervising the air knifing at DC-14 and DC-08 which may attract some interest from facilities.

More when we have news. Cold and cloudy today, but no rain or snow at this time.

Impressive. The command post looks great (and warm, I hope). You are putting Eric to work, right? I hope you are not just letting him stand around and 'supervise':)

Have drilled well and found water at about 72 feet below surface. Installed casing and will finish tomorrow early.

Some photos of Eric at the scene with some of the tools.

Weather cold about 24 degrees in the morning. but get "toasty warm later". More later as progress continues. Have been meeting some of the locals but not having coffee or drinks with them yet. Maybe they will warm up to us as the days go by. Cheers from the field crew.
